Membership Provides
access to a network of individuals and organisations interested and active in population matters

opportunity to contribute and participate in the Association's activities, including a biennial conference

access to information through the Association's publications, including the Population Review

New Members are Welcome
For further details write to: The Secretary
Population Association of New Zealand
PO Box 225
WELLINGTON

Membership Fees for the 2003/2004 year:

Ordinary Member: $45.00
(If paid by 31st October) $40.00
Associate Member (students and unwaged): $20.00
(If paid by 31st October) $15.00
Publication Member (libraries & other organisations within NZ): $65.00
Publication Member (libraries & other organisations Overseas): $100.00
Corporate Subscriptions: $100.00
INSTRUCTIONS TO CONTRIBUTORS

The Population Association of New Zealand publishes two issues of the New Zealand Population Review and two Newsletters each year. Substantive articles (5,000-8,000 words) dealing with aspects of the demography of New Zealand and the South Pacific, together with short research notes and commentaries, will be considered for publication. All articles are refereed. Longer manuscripts might be considered for publication in the Association’s monograph series.

Papers submitted for publication should be typed double-spaced on A4 size paper. Three copies should be sent to the Editor. Copies should be submitted in the format of articles published in this issue. Short quotations should be enclosed in double quotation marks. Quotations longer than three lines should be separated from the paragraph, without quotation marks, and indented three spaces from the lefthand margin. References are cited in the text with the author’s name and date of publication and are listed alphabetically at the end of the article following the conventions used in this issue. Endnotes should be employed only where essential; they should be referenced in the text and typed at the end of the paper under the title NOTES. An abstract of 50-100 words, along with a note on the author’s affiliation, should also be sent on a separate sheet.

Manuscripts should be submitted to:

Dr A Dharmalingam  
Demography and Population Studies  
Department of Societies and Cultures  
University of Waikato  
Private Bag 3105, HAMILTON  
Email: dharma@waikato.ac.nz.

No material will be returned unless specifically requested. Books for the review and other correspondence relating to publications should also be sent to the Editor. Queries concerning subscriptions, change of address etc should be directed to the Secretary.

Views expressed in articles and reviews published in the New Zealand Population Review are those of the contributors and do not necessarily reflect the views of the Population Association of New Zealand. Except for short quotation for review purposes, material must not be reproduced without the written permission of the author. Permission to reproduce entire articles for publication must be obtained from the Editor.
E G Jacoby:  
A Brief Historiography of New Zealand Demography

IAN POOL*

Dr "Peter" Jacoby can legitimately be seen as the "founding father" of modern New Zealand demography. It was for this reason that the Population Association of New Zealand, with his widow's permission, have used his name for its student prize. Parenthetically, it can be noted here that the Goethe Society independently set up a Jacoby Prize — I only learnt about this a year or so ago. In sum then, two professional bodies have recognised the contribution of Dr Jacoby to New Zealand Scholarship. Beyond this, representatives of the state library in the Landt where he had studied — Schelswig — came to New Zealand to collect the papers of this notable "native son" for their archives.

There might have been other contenders. One could cite a number of the chapters in New Zealand's first "history" (The Story of New Zealand, 2 vols) by the Victorian polymath Dr A S Thomson (he also wrote on “The Customs and Diseases of New Zealanders”, British and Foreign Medical-Chirurgical Review 1854, and may have been the Anonymous writing in the Edinburgh Review 1850); or the fascinating paper by Dr Newman “Is New Zealand a Healthy Country?” (Transactions and Proceedings of the New Zealand Institute, later The Royal Society of New Zealand). A strong candidate would be the great medical practitioner and anthropologist, Dr Te Rangihiroa (Sir Peter Buck) who wrote New Zealand's first piece of modern epidemiology ("The Smallpox Epidemic Amongst Maoris in the Northern District", Australian Medical Congress, published 1914), whose "Coming of the Maori" has much of demographic interest, and who gave us the first attempt to measure intermarriage. His contribution to social science is

* Professor of Demography, University of Waikato, Hamilton. Email: pool@waikato.ac.nz
marked by the Te Rangihiroa Prize of the Royal Society of New Zealand. And of course statisticians such as E P Neale, who in the inter-war years evaluated the quality of official statistics, von Dadelszen (a remarkable Registrar General late in the 19th Century, *New Zealand Dictionary of National Biography*) should not be ignored.

But it is the singular contribution of Jacoby that dictates that he must be accorded first place. He arrived as a refugee fleeing Hitler's Germany, and was drafted into the Education Department, working most of his career in the old "Wooden" building that now houses Victoria University's Law School. These were exciting days for education in New Zealand when the great Dr Beeby, who was later to play a major role in UNESCO, launched innovative programmes running from the "playway to education", that so incensed conservatives of the day, to special projects for the then Pacific Island Territories, the template for which was exported to UNESCO for newly independent countries. He gathered around him intellectually distinguished New Zealanders to make the department more a "think tank" than a classical bureaucracy.

Peter Jacoby's particular contribution to this think tank was his work on school projections. He was so successful with this methodology that UNESCO published it and distributed it worldwide as a model. In fact, one year he was too accurate, forecasting correctly down to the last digit and making it into Jack Ripley's internationally syndicated "Believe it or Not" newspaper column. Unfortunately, after his retirement the memory bank of the rigour the department had pursued through him seems to have been lost, and by the late 1970s/early 1980s projections that were wildly wrong were published using inappropriate mathematical techniques, that sparked an agonised response by Nick Pole and me in the *New Zealand Review of Educational Studies* (1984). A salutary lesson is that it was the bad projections that were the bases for policies (radically cutting Teachers' College intakes to cater for a projected intake of about only 15,000 first year primary pupils by 1990), not forecasts that followed Jacoby's methods.

As a side-product, Jacoby became interested in the fertility behaviour of New Zealand Pakeha birth cohorts, who would produce the children who would become the primary school entrants. Making a pilgrimage to Princeton in the early 1950s, he worked alongside people like Ansley Coale. This resulted in a major paper published in *Population Studies* (UK) (1956) — one of the more fundamental pieces of research on cohort trends in a period
in which these analyses were only getting underway. In a sense, therefore, we can see this New Zealander as a contributor to pioneer research in what was to be a very important development for demography as a field. A companion paper published in the *Economic Record* drew attention to New Zealand's longstanding Pakeha patterns of ex-nuptial conception followed by marital birth.

When he retired Jacoby turned back to his real intellectual love — social philosophy. He carried out research on the Schelswig sociologist Ferdinand Tonnies, author of *Gemeinschaft und Gesellschaft*, key concepts that guided earlier generations of sociology students. Jacoby felt that Tonnies' contribution had been neglected, and set out to strengthen the record.

Jacoby, then, was an urbane, sophisticated scholar and a gentleman in the true sense of that word, who also made a major contribution technically and substantively. Any student of New Zealand demography must recognise their debt to the contribution of this distinguished progenitor of our discipline.
